DETAILED ACTION

Allowable Subject Matter

1. Claims 1, 2, 11, 13-15, 22, 24, 26, 27, and 29-34 are allowed.
2. The following is an examiner's statement of reasons for allowance:

Amended claim 1 requires information to be assimilated into a database of corresponding logical forms associated with an automatic machine translator in order to reduce the likelihood that a translation error will be repeated in subsequent translations. In light of Applicant's arguments, Takeda et al. do not disclose assimilating information into a database of logical forms. Logical forms are a specific data structure that describe labeled dependencies among content words and can normalize certain syntactical alternations and resolve both intrasentential anaphora and long distance dependencies. The database of Takeda et al. simply replaces "headwords" in a database. This does not teach or suggest assimilating information into a database of logical forms.

In regard to claim 22, Kuno et al. disclose that a user can select portions of translated sentences to be retranslated while indicating that other portions are correctly translated. Presumably, this would result in a better parse and a better translation after the retranslation. However, upon further consideration, Kuno et al. do not disclose or suggest that information is assimilated into a collection of parsing information so as to reduce the likelihood that a translation error will be repeated in subsequent translations. That is, the retranslation process does not update a collection of parsing information for subsequent translations.

Regarding claim 27, in light of Applicant's arguments, Cheng et al. could not be said to transmit update information across a network to be assimilated into a knowledge source associated with a different automatic machine translation system. The system of Cheng et al., while providing multiple vendors access to translation services, maintains a single central knowledge source. While this single knowledge source is updated with information from a plurality of translators, there is not a specific teaching or suggestion in Cheng et al. to provide update information to a different knowledge sources associated with a different machine translation system.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
